Percona

Unbiased Open Source Database Experts

Percona is a leader in providing best-of-breed enterprise-class support, consulting, managed services, training, and software for MySQL®, MariaDB®, MongoDB®, PostgreSQL and other open source databases in on-premises and cloud environments. An unbiased, trusted partner, Percona provides single-source expertise in multi-vendor environments that eliminates lock-in, increases agility and enables business growth.

As an open source company, we value providing the best solution for our customers, regardless of their database architecture or platform. Being "technology agnostic" means that we can give you the right solution to address your database needs, without chaining you to specific software.

Our global 24x7x365 support and consulting experts have worked with over 3,000 clients worldwide, including the largest companies on the Internet, who use open source database platforms on-premises or in cloud environments. We maintain partnerships with Amazon Web Services, Google Cloud, Microsoft Azure, Mesosphere, and more.

With Percona's unbiased open source database expertise, your business can avoid downtime and outages, meet expected customer experience, foster operational and developer collaboration and manage enterprise risks through sound database architecture frameworks:

- Eliminate vendor lock-in. Percona eliminates the risk of vendor lock-in by providing unbiased, single-source expertise in multi-vendor environments. We know how to optimize the solutions you already have, reducing operational costs, improving ROI and helping your business stay agile and responsive.

- Embrace the cloud. A cloud-based database provides you with more flexibility, performance and cost management options. Let Percona be your trusted partner to thoroughly optimize your cloud database environment and find your best cloud database strategy.

- Optimize business performance. Delivering outstanding application experiences requires continuous database availability. Percona helps companies of any size meet high availability and business continuity requirements so the user experience is never interrupted or delayed.

- Reduce costs and complexity. Percona's best practices help companies of any size meet their business requirements so the user experience is never interrupted or delayed and ensure that your database environment is well matched for both your application deployment and your budget.

Percona Services and Software

Percona makes MySQL, MongoDB, MariaDB, PostgreSQL and other open source database environments faster and more reliable for customers around the world with high-value professional services, including Support, Consulting, and Managed Services. We also publish our own open source software products and tools.

- **Percona Support** provides a comprehensive, responsive, and cost-effective database support subscription that helps you to guarantee application performance whether you deploy MySQL, MariaDB, MongoDB, or PostgreSQL – on premise, in the cloud, in a DBaaS environment, bare metal, virtualized or containerized.

- **Percona Managed Services** provides deep operational knowledge of MySQL, MongoDB, MariaDB, Amazon AWS, Amazon Aurora and Amazon RDS, Microsoft Azure, and Google Cloud Platform to ensure your database performs at the highest levels., coupled with 24x7x365 monitoring and response.

- **Percona Consulting** provides trusted advisors with decades of experience solving complex database performance issues and design challenges. We provide the best solution for your database environment, without bias, so that you can reach your business objectives.

- **Percona Training** provides training in database configuration knowledge, best practices and backup and recovery techniques that are geared to support your specific application and website needs.

- **Percona Server for MySQL** provides superior performance, scalability and instrumentation. It also includes enterprise-grade features and functionality.

- **Percona Server for MongoDB** includes enterprise-grade features and functionality.

- **Percona XtraDB Cluster** is an active/active high availability, high scalability open source solution for MySQL clustering that integrates **Percona Server for MySQL** and **Percona XtraBackup** with the **Codership Galera** library.

- **Percona XtraBackup** performs online non-blocking, tightly compressed, highly secure backups on transactional systems so that applications remain fully available during planned maintenance windows.

- **Percona Monitoring and Management (PMM)** provides thorough time-based analysis for MySQL, MariaDB, MongoDB and PostgreSQL servers on-premises or in the cloud.

Percona is a well-known contributor to open source MySQL, MongoDB, and PostgreSQL code, and has developed and added MySQL, MongoDB, and PostgreSQL features to the open source community for many years. Our developers work with our customers to solve MySQL, MongoDB and PostgreSQL bugs, and contribute those solutions to the community.

Percona was founded in August 2006 by Peter Zaitsev and Vadim Tkachenko, and now employs a global network of experts with a staff of over 145 people. The **Percona Performance Team** includes experienced members and experts from the open source database community.

Our customer list is large and diverse and we have one of the highest renewal rates in the business. Our expertise is visible in our widely read **Percona Database Performance blog**, Peter's book **High Performance MySQL**, our **Percona Live Open Source Database Conferences** and our **Practical MySQL Performance Optimization** ebook.
